

Design Worksheet : Design a Complete STEM Walk Tour

Use this sheet if you are working on a longer tour consisting of several stops!

1. **SELECT** Make sure the activities required to address your questions at all your STEM walk stops are varied. For example, if most of the stops focus on the same concept or involve very similar strategies like solving a multi-step STEM problem, you may want to modify.

A large, empty light blue rectangular area intended for the user to take notes or provide details for the first step of the design process.

2. **DESIGN** Take this time to review what you've created! Decide on how you will make your tour available to the public. Options include live guided experience, series of short (approx 2 min) videos, QR codes, and more. If you're interested in making use of videos, be sure to view our template and guide [here](#) on our website!

A large, empty light blue rectangular area intended for the user to take notes or provide details for the second step of the design process.
